

EXECUTIVE SUMMARY

Horizon Segment LLC delivers multidisciplinary well service solutions for the West African energy sector. We operate as a unified execution vehicle, combining world-class industrial procurement with the operational depth of our technical partners.

Our execution alliance holds a cumulative history of over 30 years in Drilling, Well Intervention, and Turnaround Maintenance. We have successfully delivered campaigns for majors and independents including Midwestern Oil & Gas, Seplat Energy, NPDC, and First Hydrocarbon Nigeria (FHN). We do not just rent equipment; we engineer solutions that navigate complex geology, hostile community environments, and tight project schedules.

SIGNATURE CASE STUDY: UMUSADEGE FIELD DEVELOPMENT (OML 56)

Demonstrating Horizontal Drilling & Hydraulic Stimulation Proficiency

The Challenge:

Full-scale field development of the Umusadege field (Delta State, Nigeria) characterized by vertically stacked sandstone reservoirs within complex rollover anticline structures. The objective was to maximize recovery through aggressive drilling and stimulation.

The Execution (2008 – 2016):

Horizon Segment's execution network led an 18-well drilling campaign that transformed the asset's production profile.

- **Scope:** 18 Wells (Development & Appraisal).
- **Well Profiles:** Mixed portfolio of Vertical, Deviated, and Horizontal wells.
- **Horizontal Complexity:** Successfully landed and navigated horizontal lateral sections ranging from 2,000 ft to 3,000 ft within target sands.
- **Standard Depths:** Measured Depth (MD) ~9,500 ft | True Vertical Depth (TVD) ~8,000 ft.

The Stimulation Value-Add:

To bypass skin damage and enhance permeability, we deployed high-pressure hydraulic fracturing services on key producers:

- **Fracturing Operations:** Successfully executed on Wells 9, 11, and 13.
- **Result:** Field production peaked between 10,000 bpd and 25,000 bpd, validating the stimulation strategy.

OPERATIONAL METRICS (THE HORIZON STANDARD)

98% NATIONAL CONTENT

We have achieved NCDMB targets on indigenous rig ownership and manning levels.

COMMUNITY STABILITY

Proven track record of managing "freedom to operate" in volatile swamp/land regions (Delta/Warri).

TECHNICAL UPTIME

Consistent delivery of <1% Non-Productive Time (NPT) on critical equipment spreads.

OPERATIONAL HISTORY: CHALLENGING TERRAINS

Proven Performance Across Swamp, Land, and Shallow Offshore

PROJECT EXECUTION MATRIX

A selection of campaigns executed by the Horizon Segment Alliance (Rig Assets & Technical Services)

OPERATOR / FIELD	LOCATION	SCOPE OF WORK & TECHNICAL HIGHLIGHTS
Midwestern Oil & Gas (Umusadege)	OML 56 (Land)	Drilling & Fracking: 18-Well Campaign. Executed 3,000ft horizontal sections and multi-stage fracking on Wells 9, 11, & 13.
Seplat Energy (Amukpe, Okporhuru)	OML 4, 38, 41	Marginal Field Development: Integrated well services for one of Nigeria's largest indigenous producers. Focus on production optimization.
FHN / Heritage (Ogini Field)	OML 26 (Delta)	Deep Drilling & Workover: Executed 7+ wells (Ogini 1, 6, 8, 13, 19, 20). Proven depth capability to 12,440 ft. Achieved Zero NPT on multiple wells.
NPDC (Okono / Okpoho)	OML 119 (Offshore)	Swamp/Offshore Intervention: Validated logistics and supply chain capability for offshore/swamp environments.
Lekoil (Otakikpo)	OML 11 (Swamp)	Heavy Workover: Re-entry and completion of Otakikpo 2 & 3. Handling heavy casing strings at 11,686 ft.

INTEGRATED SERVICE LINES

Delivering the "Total Well Package" for Trident Congo. Our diversity allows us to minimize interface risk by bundling critical services under a single Project Management Team.

1. Well Construction (Drilling)

- **Assets:** Heavy Duty Land Rigs (2000 HP / 1500 HP) capable of 20,000ft+ depths.
- **Focus:** Horizontal geosteering and high-pressure/high-temperature (HPHT) capability.

2. High-Pressure Pumping (Stimulation)

- **Fracking:** High-volume frac spreads (Gardner Denver 2000 HP units) for tight formation breakdown.
- **Cementing:** Precision slurry placement for zonal isolation in horizontal liners.

3. Well Intervention & Integrity

- **TRS:** Automated casing running tools (JAM System) ensuring gas-tight connections.
- **Slickline/E-Line:** Real-time downhole data acquisition and mechanical intervention.
- **TCP/DST:** Tubing Conveyed Perforating and Drill Stem Testing for accurate reservoir appraisal.

CLOSING STATEMENT TO TRIDENT ENERGY

"We do not offer experiments; we offer replication. The horizontal drilling success we achieved in Umusadege and the deep-well reliability we proved in OML 26 will be duplicated in the Congo Campaign. We are ready to drill."
